

Medicinal Cannabis

from Plant to Product

Free Seminar:

A workflow for quality cannabis production

Cannabis medication merges plant-derived extracts with stringent requirements of pharmaceutical production. Australia and New Zealand are at the forefront of pharmaceutical grade medicinal cannabis production, which often poses unique challenges due to the lack of relevant experience. This seminar provides an introduction into Good Manufacturing Practice and Therapeutic Goods Order compliant production and quality testing.

Programme:

- 08:30** Registration
- 09:00** **Testing 1 - Raw Material**
Rod Finney (Technical Sales and Support, SFE/SFC) - Shimadzu
